Abstract of JP62146903

PURPOSE:To obtain the title copolymer of a desired degree of substitution by hydrazide groups easily in good yields, by reacting a copolymer comprising a specified vinyl monomer with a hydrazide forming reagent in an organic solvent. **CONSTITUTION:**The following copolymer is reacted with a hydrazide forming reagent in an organic solvent, whereupon the ester groups of amide groups in the vinyl monomer A moiety of the components of the copolymer are selectively converted into hydrazide groups to form a copolymer partially substituted by hydrazide groups. Said copolymer used is one comprising a vinyl monomer A having an ester or amide group in the molecule and a vinyl monomer B having the same group as above and having a value of log P larger than that of monomer A by at least 0.4, or a copolymer comprising said monomers A and B and a vinyl monomer C having an ester group or an amide group in the molecule and being copolymerizable therewith.
